

AgriShare

How It Works

From finding equipment to completing your rental.

"Smarter Farming. Better Access."

■ Equipment Discovery

Browse tractors, harvesters, seeders, and specialized machinery with real-time specs.

■ Transparent Booking

Direct farmer-to-owner requests with backend price and deposit validation.

■ Verified Community

Closed-loop review system ensuring reliable equipment and verified owners.

Product Version: 1.0 | **Release Year:** 2026 | **Architecture:** Next.js + Django REST Framework
Official Platform & User Workflow Visual Onboarding Guide

What is AgriShare?

Connecting Farmers in Need with Available Agricultural Machinery

AgriShare is a modern agricultural equipment sharing marketplace. High-capacity farming machinery is expensive to purchase, maintain, and store. Many small to mid-sized farmers face machinery shortages during peak harvest and sowing seasons, while local equipment owners frequently have tractors and tools sitting idle.

AgriShare bridges this gap: **Farmers gain affordable on-demand access** to crucial implements without capital debt, and **Equipment Owners turn unused machinery into reliable rental revenue**.

[Verified Feature] Key Value Proposition

- **Zero Debt:** Pay only for actual working days without purchasing machinery.
- **Asset Monetization:** Owners maximize return on machinery investments.
- **Regional Food Security:** Timely machinery access improves crop yields.

The AgriShare Journey

11 Clear Steps from Registration to Verified Review

1 1. Create Account Register securely with name, email, username, and contact details.	7 7. Send Request Submit booking; the system marks it PENDING and notifies the owner.
2 2. Login Authenticate via JWT tokens to unlock verified platform capabilities.	8 8. Owner Decision Owner reviews the request schedule and either Approves or Rejects it.
3 3. Browse Equipment Explore agricultural categories: Tractors, Harvesters, Seeders, Tools.	9 9. Rental Execution Farmer picks up machinery, executes fieldwork, and returns the asset.
4 4. Search & Filter Find exact machinery matching your location, price, and condition criteria.	10 10. Booking Completion The booking transitions to COMPLETED once the rental is finished.
5 5. View Details Inspect full specifications, daily rates, security deposit, and photos.	11 11. Community Review The farmer rates the experience (1–5 stars) to guide future renters.
6 6. Select Dates Choose rental start and end dates; system calculates total days & cost.	■ Successful Rental Cycle Both parties achieve their agricultural and financial goals safely.

USER REGISTRATION

Step 1 — Create Your Account

Fast, Intuitive, and Secure Onboarding

Getting started on AgriShare requires a unified user account. Both prospective renters (farmers) and equipment owners register through the same streamlined portal.

Field Name	Description / Purpose	Validation Rule
First & Last Name	Personal identity for contracts and communication	Required text
Email Address	Primary channel for notifications and password recovery	Unique valid email format
Username	Unique platform identifier used for login	Unique alphanumeric
Password	Account protection credential	Strong hashing (PBKDF2/Argon2)
Phone Number	Coordination for equipment pickup and return	Valid numeric contact

1. Fill Registration Form
User submits details on Next.js UI

|
v (POST /api/users/register/)

2. Backend Validation & Encryption
Django checks unique email/username & hashes password

|
v (HTTP 201 Created)

3. Account Activated & Ready for Login
User can immediately sign in to browse and book

[System Insight] Security Notice

Passwords are encrypted on the server before storage. AgriShare never stores plain-text passwords.

AUTHENTICATION

Step 2 — Login

Secure Stateless Access via JSON Web Tokens (JWT)

AgriShare uses industry-standard JWT (JSON Web Token) authentication to verify identities. This eliminates server-side session overhead and guarantees secure, seamless communication between the Next.js frontend and the Django REST API.

■ Access Token (Short-Lived)

- Included in the Authorization: Bearer header for every API request.
- Authorizes user actions like booking machinery, adding listings, and leaving reviews.
- Expires automatically to prevent unauthorized access if intercepted.

■ Refresh Token (Long-Lived)

- Securely stored to generate fresh Access Tokens without forcing re-login.
- Provides a frictionless user experience while maintaining stringent API security.
- Revoked automatically upon explicit user logout.

User enters Username + Password

↓
v (POST /api/token/)

Django REST Framework validates credentials & generates token pair

↓
v (Returns Access + Refresh Tokens)

Frontend stores token securely & authorizes protected actions

[System Insight] Protected Capabilities

Unauthenticated visitors can browse equipment listings. However, sending booking requests, listing new machinery, and submitting reviews require an active JWT session.

DISCOVERY

Step 3 — Find Equipment

Browsing the Agricultural Machinery Catalog

Farmers can explore a diverse catalog of agricultural machinery tailored to various seasonal farming phases, including soil preparation, sowing, crop maintenance, irrigation, and harvesting.

■ Tractors & Heavy Machinery

Key Implements: 35HP–75HP Utility Tractors, 4WD Tractors, Tillage Units.

Primary Use: Heavy land preparation, ploughing, deep harrowing, and haulage.

■ Harvesters & Combines

Key Implements: Multi-crop Combine Harvesters, Paddy Reapers, Threshers.

Primary Use: Rapid harvesting, grain separation, and post-harvest clearing.

■ Seeders & Planters

Key Implements: Pneumatic Precision Planters, Direct Seed Drills, Transplanters.

Primary Use: Uniform seed distribution, precise spacing, and optimal soil depth.

■ Irrigation Equipment

Key Implements: Diesel/Solar Water Pumps, Drip Lateral Systems, Sprinkler Guns.

Primary Use: Water management, drought mitigation, and controlled irrigation.

■ Specialized Tools & Implements

Key Implements: Power Tillers, Boom Sprayers, Rotary Slashers, Straw Balers.

Primary Use: Weed control, fertilizer application, mulching, and baling.

[System Insight] Dynamic Catalog

All listings display real-time availability badges. Equipment currently undergoing active rental is clearly flagged to prevent scheduling conflicts.

DISCOVERY & FILTERS

Step 4 — Search & Filter

Precision Multi-Attribute Search Engine

Finding the right machinery for specific soil types and acreage is effortless. AgriShare provides an advanced search and filtering system across multiple technical and logistical criteria.

Mechanism	Parameters / Criteria	User Benefit
Keyword Search	Name, Model (e.g., 5050D), Brand (e.g., John Deere, Mahindra), Description keywords	Instant matching on specific models
Category Filter	Tractors, Harvesters, Seeders, Irrigation, Tools	Narrow down to specific tasks
Condition Filter	New, Good, Fair	Choose based on operational intensity
Location Filter	City, District, Regional Zone	Minimize transport and haulage costs
Price & Availability	Daily Rate Range (\$ Min – Max), Available Now status	Stay within seasonal budget constraints
Sorting Options	- Newest First - Price: Low → High - Price: High → Low - Alphabetical (A–Z)	Prioritize cost-efficiency or latest additions

SEARCH TEXT "Mahindra 575"	+	FILTERS Category: Tractors Loc: Kalaburagi	+	SORTING Price: Low → High	=	PERFECT RESULTS Exact match in seconds
-------------------------------	---	--	---	------------------------------	---	---

EQUIPMENT OVERVIEW

Step 5 — View Equipment Details

Comprehensive Specifications and Transparent Information

Clicking any listing opens a detailed equipment page. Every listing provides full transparency into specifications, pricing structure, owner profile, and verified community reviews.

John Deere 5050D Utility Tractor (50 HP)		AVAILABLE NOW	
Category: Tractors • Listed by: Ramesh Patel • Location: Hubli Sector 4		★ 4.9 (14 Reviews)	
Brand & Model:	John Deere 5050D	Daily Rental Rate:	\$65.00 / day
Mfg. Year:	2022	Security Deposit:	\$150.00 (Refundable)
Condition:	Excellent (Serviced May 2026)	Fuel Type:	Diesel
Description:	50 HP dual-clutch tractor equipped with dual-acting power steering and standard 540 RPM PTO. Ideal for heavy tillage, disc harrowing, and trailer haulage.		

What Renters Should Inspect on the Details Page

- **High-Resolution Photos:** Inspect actual equipment state, tyre tread, and hitch attachments.
- **Security Deposit:** Refundable guarantee held against equipment damage.
- **Owner Feedback History:** Read authentic ratings from fellow farmers who rented this exact machine.

DATE SELECTION

Step 6 — Choose Your Rental Dates

Automated Duration and Cost Calculation

Once a farmer selects equipment, they specify the required rental window. The AgriShare frontend dynamically computes the schedule while the Django backend enforces strict validation logic.

Computation Step	Formula / Logic	Example Value
Start & End Date	User picks rental start and end days via calendar picker	June 10 → June 14, 2026
Rental Duration	$\text{Duration} = (\text{End Date} - \text{Start Date}) + 1$	5 Days
Daily Rate	Fixed rate set by the equipment owner	\$65.00 / day
Base Rental Amount	$\text{Duration} \times \text{Daily Rate} (5 \times \$65.00)$	\$325.00
Security Deposit	Refundable deposit specified by owner	\$150.00
Total Estimated Commitment	Base Rental Amount + Security Deposit	\$475.00

[Important Rule] Server-Side Date & Price Validation

- **No Past Dates:** Start Date cannot be set prior to today's date.
- **Chronological Validity:** End Date must be greater than or equal to Start Date.
- **Anti-Tamper Pricing:** Total amount is recalculated on the backend—client-side price tampering is rejected.

[System Insight] Overlap Prevention

AgriShare prevents double-booking. If another renter has an APPROVED booking during those dates, the booking submission is rejected.

BOOKING CREATION

Step 7 — Send a Booking Request

Initiating the Formal Rental Contract

After verifying the dates and estimated cost, the farmer clicks '**Confirm Booking Request**'. This generates a new record in the database with an initial status of **PENDING**.

■ What PENDING Means for the Farmer

- Your booking request is logged and awaiting owner review.
- You can track status in your **Farmer Dashboard**.
- You may cancel the pending request if plans change.

■ What PENDING Means for the Owner

- Incoming request details appear in **Owner Dashboard**.
- Shows renter identity, requested dates, and earnings.
- Owner has exclusive authority to Approve or Reject.

BOOKING DECISIONS

Step 8 — Owner Reviews the Request

Two-Branch Decision Flow for Equipment Owners

Equipment owners maintain full autonomy over their machinery. When a new request arrives, the owner inspects the requested dates, maintenance schedule, and logistics before making a decision.

INCOMING PENDING REQUEST

BRANCH A: APPROVE

- Owner confirms equipment readiness.
- Status changes to **APPROVED**.
- Dates are locked on the calendar.
- Handover instructions are unlocked.

BRANCH B: REJECT

- Equipment unavailable or under repair.
- Status changes to **REJECTED**.
- Dates remain open for other renters.
- Farmer is notified to explore alternatives.

[System Insight] Owner Verification Protocol

Owners are encouraged to check their machinery's oil levels, tyre pressure, and implement attachments prior to approving requests.

STATE MACHINE

Understanding Booking Status

The 5 Discrete Lifecycle States of an AgriShare Rental

To ensure complete clarity between both parties, every booking moves through a strict state machine. Below is the comprehensive status reference:

Status	Trigger / Transition	Description & Permissions
PENDING	Farmer submits request	Awaiting owner review. Renter can cancel; Owner can Approve or Reject.
APPROVED	Owner accepts request	Rental schedule is locked. Handover coordination begins.
REJECTED	Owner declines request	Terminal state. Equipment is not reserved; renter may seek other listings.
CANCELLED	Farmer cancels prior to rental	Terminal state. Dates are released back to the general marketplace.
COMPLETED	Equipment returned safely	Terminal state. Unlocks the review and rating workflow for the farmer.

PENDING	→ (Owner Approves) →	APPROVED	→ (Rental Ends) →	COMPLETED
↓ (Reject)		↓ (Cancel)		↓ (Review)
REJECTED		CANCELLED		REVIEWED

RENTAL PHASE

Step 9 — Use the Equipment

Fieldwork Execution, Handover, and Operational Protocol

Once a booking reaches **APPROVED** status, the physical rental takes place according to the agreed schedule. Both parties coordinate directly for pickup, operation, and return.

- A

Pickup & Physical Inspection

Farmer and owner meet. Both inspect the machinery for existing wear, verify fuel levels, and review operating instructions.
- B

Field Operations

The farmer operates the equipment safely during the agreed rental dates (e.g., tilling, seeding, harvesting).
- C

Return & Handover Check

The equipment is returned to the owner. The owner verifies that the machinery is in sound, clean working order.

Best Practices During Active Rental

- **Safety First:** Only qualified operators should handle heavy machinery (tractors, combines).
- **Timely Return:** Adhering to the agreed return time prevents delays for subsequent renters.
- **Prompt Communication:** Notify the owner immediately in case of unexpected weather delays or equipment issues.

COMPLETION

Step 10 — Complete the Booking

Closing the Rental Record and Releasing Resources

After the machinery is returned and verified, the booking is formally transitioned to **COMPLETED**. This is a vital milestone in the AgriShare marketplace workflow.

■ Frees Up the Calendar

The machinery's schedule is immediately unlocked, allowing other local farmers to book upcoming dates without overlap restrictions.

■ Unlocks Review Workflow

Only completed bookings are eligible for reviews. This guarantees that every review originates from a genuine, fulfilled transaction.

REPUTATION & REVIEWS

Step 11 — Rate Your Experience

Community Trust Built on Verified Peer Feedback

Community trust is the cornerstone of AgriShare. Once a booking is marked **COMPLETED**, the farmer can rate the machinery and write qualitative feedback based on their real-world experience.

Submit Equipment Review
Verified Rental • John Deere 5050D

★ ★ ★ ★ ★ (5/5)

Rating:	5 Stars — Outstanding Performance
Comment:	"The tractor was delivered in immaculate condition, fully serviced, with smooth hydraulics. Completed 12 acres of tillage in 2 days. Highly recommended owner!"
Reviewer:	Suresh K. • Verified Farmer • June 2026

Platform Review Guidelines & Safeguards

- **One Review per Booking:** Prevents duplicate submissions or review bombing.
- **Verified Completed Bookings Only:** Cannot review equipment you haven't rented.
- **Reputation Algorithm:** Equipment rating is recalculated automatically as the rolling average of all verified reviews.

OWNER LIFECYCLE

How Equipment Owners Use AgriShare

Monetizing Idle Machinery in 6 Clear Stages

Equipment owners can turn capital machinery into steady revenue streams with complete control over availability, pricing, and booking approvals.

- 1

1. Register Account
Create a profile with phone number and location details for seamless coordination.
- 2

2. List Equipment
Provide technical specifications, model, manufacturing year, and condition details.
- 3

3. Set Daily Pricing
Define competitive daily rental rates and refundable security deposits.
- 4

4. Upload High-Res Photos
Showcase machinery condition, attachments, and operational capabilities.
- 5

5. Manage Incoming Requests
Review farmer requests in the Owner Dashboard and Approve or Reject promptly.
- 6

6. Complete & Earn
Fulfill the rental, receive machinery back safely, and build a 5-star reputation.

[System Insight] Owner Protection

Owners retain 100% control over which requests to accept. You are never obligated to accept bookings if your machinery is scheduled for personal farm use.

LISTING CREATION

Listing Equipment

Comprehensive Information Architecture for New Machinery

Creating a detailed listing takes less than 3 minutes. The form captures essential technical and financial parameters to attract verified renters.

Field	Input Type	Description & Purpose
Equipment Name	Text	Descriptive title (e.g., <i>Mahindra 575 DI Tractor</i>)
Category	Dropdown	Tractor, Harvester, Seeder, Irrigation, Farming Tool
Brand & Model	Text	Manufacturer and exact series identifier
Mfg. Year	Number	Year of fabrication (e.g., <i>2023</i>)
Condition	Select	New, Good, or Fair working order
Price per Day	Decimal (\$)	Daily rate billed to the renter
Security Deposit	Decimal (\$)	Refundable security guarantee
Pickup Location	Text	Village, city, or equipment depot location
Images	File Upload	Multi-image upload showcasing machinery condition

[Verified Feature] Owner Listing Management

Owners can edit pricing, update descriptions, and toggle availability from their dashboard at any time.

OWNER HUB

Owner Dashboard

Centralized Command Center for Equipment & Rentals

The Owner Dashboard provides full visibility over listed assets, incoming rental inquiries, active rentals, and historical performance.

■ Implemented Dashboard Capabilities

- **My Equipment:** View, edit specifications, toggle active status, or delete listings.
- **Incoming Requests:** Instant action buttons to Approve or Reject incoming bookings.
- **Rental History:** Track all completed, rejected, and cancelled bookings.
- **Review Insights:** Read customer ratings left by verified renters.

■ Planned Future Dashboard Analytics

Planned

- **Revenue Analytics:** Monthly revenue breakdown and payout history graphs.
- **Maintenance Logs:** Telemetry tracking engine hours and servicing alerts.
- **Dynamic Pricing:** Seasonal rate recommendations based on regional demand.
- **Tax Statements:** Automated year-end rental income export.

FARMER HUB

Farmer Dashboard

Comprehensive Activity Hub for Equipment Renters

The Farmer Dashboard provides renters with a consolidated view of their current, upcoming, and past machinery bookings.

Tab / Section	Displayed Items	Available Actions
Pending Bookings	Requests sent to owners awaiting approval	Cancel Request • View Request Details
Approved Rentals	Accepted bookings ready for pickup/fieldwork	View Pickup Info • Contact Owner
Completed Rentals	Past fulfilled rentals	Leave a Review • View Receipt
Cancelled / Rejected	Declined or withdrawn requests	Book Alternative Machinery

Farmer Profile & Preferences

- **Personal Information:** Update phone number, default village/location, and profile details.
- **Rental History Record:** Maintain a complete digital record of machinery rented for seasonal tax and farm accounting.

NOTIFICATIONS

Stay Updated

Platform Event Triggers and Communication Channels

Timely updates are critical during fast-moving planting and harvesting windows. AgriShare tracks essential operational events across the rental lifecycle.

Event Trigger	Recipient	Payload & Message	Status
Booking Requested	Owner	"New booking request from [Farmer] for [Dates]"	In-App
Booking Approved	Farmer	"Your booking for [Equipment] has been approved!"	In-App
Booking Rejected	Farmer	"Your booking request was declined by the owner"	In-App
Rental Completed	Both	"Rental concluded. Please leave a review"	In-App
New Review Left	Owner	"[Farmer] left a 5-star rating on [Equipment]"	In-App

[Planned Feature] Planned Notification Enhancements

- **SMS Notifications:** Direct cellular SMS for farmers operating in low-bandwidth rural zones.
- **WhatsApp Integration:** Instant booking confirmations sent straight to messaging apps.
- **Push Notifications:** Real-time browser and mobile app push alerts.

TECHNICAL
ARCHITECTURE

Behind the Scenes: Authentication

JWT Protocol & Security Boundaries Explained Simply

AgriShare enforces secure, stateless token authentication across every interaction. Here is how the client and server coordinate safely without exposing sensitive data:

Step	Client Action (Next.js)	API Server Action (Django REST)
1. Login	Submits username & password via HTTPS POST	Verifies hash against database; signs JWT Access & Refresh tokens
2. Token Storage	Stores Access Token in application memory / secure storage	Remains completely stateless (no heavy session DB queries)
3. Authenticated Call	Attaches Authorization: Bearer <token> header	Validates signature & unpacks user ID and permissions
4. Token Expiry	Detects 401 Unauthorized upon access token expiration	Validates refresh token at /api/token/refresh/ & issues new access token

Why This Matters for Farmers & Owners

- **High Performance:** Fast response times even on rural mobile data networks.
- **Zero Credential Leakage:** Passwords are never sent on regular browsing requests.
- **Independent Micro-Sessions:** Logging in on a mobile browser doesn't corrupt desktop sessions.

SYSTEM OVERVIEW

How the Platform Communicates

Full-Stack System Architecture & Data Flow

AgriShare is engineered as a decoupled modern web application, separating presentation from core business logic, database transactions, and security enforcement.

■■ FRONTEND TIER (Next.js / React)

- Responsive Web Interface with Tailwind CSS styling.
- Client-side validation, date range math, dynamic filtering.
- Axios HTTP Client with JWT interceptors.

|
v (REST API / JSON via HTTPS)

■ API & BUSINESS LOGIC TIER (Django REST Framework)

- RESTful API Endpoints (/api/equipment/, /api/bookings/, /api/reviews/).
- Authentication, Permissions (IsOwnerOrReadOnly), Serializers.
- Price calculation, overlap prevention, state machine transitions.

|
v (Django ORM / SQL Queries)

■■ PERSISTENCE TIER (Relational Database / PostgreSQL / SQLite)

- Normalized relational models: Users, Equipment, Bookings, Reviews, Images.
- ACID Transaction guarantees preventing race conditions and double bookings.

[System Insight] Decoupled Design Advantage

The decoupled Django REST backend can seamlessly power future mobile applications (iOS/Android) without rewriting platform business logic.

MARKETPLACE
ECONOMICS

The AgriShare Marketplace Flywheel

Two-Sided Network Effects Driving Agricultural Growth

AgriShare operates as a self-reinforcing two-sided marketplace. As more machinery is listed, farmers gain greater choice and lower prices. As more rentals complete, trust accelerates across the farming community.

[Verified Feature] The Virtuous Trust Cycle

High ratings → Attracts more farmers → Generates higher owner earnings → Encourages more equipment listings → Lowers regional equipment rental costs for all farmers.

ROLE MATRIX

Platform Feature & Permissions Matrix

Comprehensive Breakdown Across User Roles

AgriShare enforces role-based access control (RBAC). Below is the complete permission mapping across Farmer, Equipment Owner, and Platform Administrator roles:

Platform Capability	Farmer	Owner	Admin	Implementation
Browse & Search Catalog	Yes	Yes	Yes	Implemented
Filter by Category/Price/Loc	Yes	Yes	Yes	Implemented
View Full Details & Photos	Yes	Yes	Yes	Implemented
Submit Booking Request	Yes	Yes	Yes	Implemented
Cancel Pending Booking	Yes	No	Yes	Implemented
List & Edit Equipment	No	Yes	Yes	Implemented
Approve / Reject Requests	No	Yes	Yes	Implemented
Mark Booking Completed	No	Yes	Yes	Implemented
Leave 1–5 Star Review	Yes (Completed)	No	Moderate	Implemented
Integrated In-App Payments	Planned	Planned	Planned	Planned
Interactive GPS Map Search	Planned	Planned	Planned	Planned

PLATFORM TRUST

Safety & Platform Integrity

Engineered Safeguards Protecting Renters & Machinery

AgriShare implements rigorous architectural and business safeguards to ensure fair dealing, data security, and dispute-free machinery rentals.

■ Strict Ownership Boundaries

Django REST Framework enforces IsOwnerOrReadOnly permissions. Users can never edit or delete another owner's machinery listing.

■ Anti-Overlap Validation

The booking engine blocks overlapping dates for the same machine, eliminating double-booking errors.

■ Server-Side Price Calculation

Total rental fees are computed on the server based on database rates, preventing client-side price modification.

■ Closed-Loop Review Authenticity

Reviews can only be submitted for bookings in COMPLETED status. Spam and unverified reviews are physically impossible.

■ Cryptographic Password Storage

User passwords are encrypted with industry-standard PBKDF2/Argon2 one-way hashing algorithms.

[System Insight] Security Commitment

AgriShare continuously monitors API access to safeguard user data, phone numbers, and transactional records.

ROADMAP & VISION

What Could AgriShare Become?

Future Innovations and Strategic Product Roadmap

The current AgriShare architecture is designed for high extensibility. Below is the official roadmap of upcoming innovations planned for future releases:

■ Integrated In-App Escrow Payments Stripe / Razorpay integration with automated security deposit escrow and direct owner bank payouts.	■ ■ Interactive GPS Maps & Radius Search Visual map pins showing nearby machinery within a 10km, 25km, or 50km radius of your farmland.
■ Native Mobile Applications Dedicated iOS and Android mobile apps optimized for fast offline caching in low-connectivity fields.	■ Verified Farmer & Owner KYC Government ID verification and land record integration to build unmatched platform security.
■ Digital Rental Agreements & Invoices Automated PDF generation of legally binding rental contracts with e-signature capabilities.	■ AI Equipment Matching Engine Predictive crop calendar recommendations suggesting optimal tillage and harvesting machinery.

PLATFORM SUMMARY

AgriShare in 7 Simple Steps

Quick Executive Workflow Summary

1	1. Join Sign up in 30 seconds as a farmer or equipment owner.
2	2. Discover Explore local agricultural machinery across 5 specialized categories.
3	3. Search Filter by brand, model, price, condition, and pickup location.
4	4. Choose Select your required dates with automated transparent pricing.
5	5. Book Send an instant booking request to the equipment owner.
6	6. Rent Pick up the machinery, execute your farm work, and return it safely.
7	7. Review Rate your experience to empower the community with verified feedback.

For Farmers: Access modern machinery without debt.	For Owners: Monetize idle agricultural assets.	For Communities: Boost local agricultural productivity.
---	---	--

Smarter Farming. Better Access.

AgriShare makes agricultural equipment accessible by connecting the people who need machinery with the people who own it. By removing the financial barriers of equipment ownership, AgriShare empowers farming communities to thrive.

AgriShare Platform Guide

Version: 1.0
